

Lean Six Sigma

Centered on Continuous Improvement

Change is inevitable within every company and every industry. Add in the development of new technologies and you can see that change is not only inevitable, it is also constant. Lean is a proven methodology for dealing with change. Here are the steps for a successful Lean project.

Step 1: Learn the concepts of Lean to start to be able to understand and identify the specific issues your current process.

Step 2: Develop the steps for a new process. This will involve people who are IN the process doing the work alongside the leadership so both realities and expectations are revealed.

Step 3: Implement the process.

Step 4: Review the process and make changes – continuous improvement is key.

When undergoing a Lean project, we will work with you from the beginning steps of determining which areas of your company can benefit the most from LSS, to developing the new process, and even through a successful adoption and implementation. Your outcomes include streamlined processes, increased revenue, decreased costs, increased employee morale, and improved client satisfaction.

Our mission at Avizo Group, Inc. is to help companies and clients reach their personal and financial goals. Lean Six Sigma can help with this by creating more streamlined processes and increasing the quality of your product or service.

Earl Blackmon, CPA, CGMA
Lean Six Sigma Greenbelt
eblackmon@avizogroup.com

A shareholder of Avizo Group, Earl became passionate about Lean Six Sigma after seeing the incredible improvements it brought to our firm. Since earning his Green Belt in 2012, Earl has performed Lean workshops and implementation across the United States.
